Data Collection Assist Success Stories

measurabl

One of the largest financial corporations in the world

Overview

For the last 20 years, this company has made sustainability a priority, measuring and benchmarking its ESG performance along the way. But training property managers to gather and manage data collection that can't be automated or reaching out to them to acquire that data became burdensome and time-consuming.

Solution

Within six months, Measurabl's Data Collection Assist doubled this financial institution's number of active sites in the platform from 118 to 229 and increased data coverage by 51%.

A multinational financial services corporation

Overview

The company used Mesurabl's Data Collection Assist to upload data for internal research and reports. Its goal was clear: Achieve 100% data completeness by March 2023 to report CDP scope 2 emissions and get better visibility into electricity use data as it explored renewable energy options.

Solution

Understanding that gathering data could burden its full-time employees, the company was looking for someone knowledgeable with Measurabl's software. In less than a year, Data Collection Assist increased Electric Meter Completeness from 6% to 94%, and the company hit its goal of total data completeness 45 days before the deadline.

Real estate investment management company

Overview

The LA-based asset manager came to Measurabl with six sold multifamily properties and no historical data to report. Gathering that data would be a massive undertaking that, without a doubt, would bury their team in administrative tasks.

Solution

Measurabl's Data Collection Assist uploaded historical data on those six properties from close to 7,000 invoices in just two months, saving employees invaluable time and resources.

A leading healthcare REIT

Overview

The firm, which owns triple-net-lease properties, created an internal cost-saving program to drive energy and water efficiency and improve property performance and lower cost while reducing their carbon footprint. In order to identify these opportunities, they need to analyze energy usage and cost for every one of their properties. So they sought Measurabl's assistance in collecting data for their 56 managed sites and 300+ triple net-leased properties.

Solution

In just 6 months, Measurabl onboarded all 56 managed properties with complete and up-to-date data. Additionally, the Data Collection Assist team added 140 triple net properties to the platform and estimates to reach 100% data completeness for these by June 2023.

| 6 months | 2X active sites | 2X data coverage | 94% electric meter completeness | 95% response from property managers | 1.5 months ahead of deadline | 6,912 invoices uploaded | 2 months | 90 hours of work saved | 100% data completeness on all managed sites | 400+ Utility Sync meters in 5 months | 100+ hours of work saved |
